## LIST OF ACRONYMS

- ANTC: Additional Net Transfer Capacity  
ANTCfinal: Additional Net Transfer Capacity required to be 70%minMargin compliant  
ANTCfeasible: Feasible Additional Net Transfer Capacity to be adjusted  
BD: Business Day  
CACM: Capacity Allocation and Congestion Management  
CC: Capacity Calculation  
CCR: Capacity Calculation Region  
CNE: Critical Network Element  
CNEC: Critical Network Element Contingency  
CRA: Curative Remedial Actions  
D2: D-2 process  
ID: Intraday process  
IN: Italy North  
MinMargin: minimum margin  
NTC: Net Transfer Capacity  
RA: Remedial Actions  
RCC: Regional Coordination Centre  
TS: Timestamp  
TTC: Total Transfer Capacity  
TTCAdj: Total Transfer Capacity after the adjustment process

## 1. Introduction

The capacity calculation (CC) process for Italy North (IN) Capacity Calculation Region (CCR) is performed by Coreso and TSCNET appointed by the Central Europe System Operation Region (Central SOR) as Regional Coordination Centre on the 1<sup>st</sup> of July 2022. The CC task is provided to IN region as described in the latest version of the D2 and ID methodologies approved by IN NRAs.

"Methodology for an intraday common capacity calculation in accordance with Article 21 of Commission Regulation (EU) 2015/1222 of 24 July 2015 establishing a guideline on capacity allocation and congestion management within Italy North CCR"

And

"Methodology for a common D2 capacity calculation in accordance with Article 21 of Commission Regulation (EU) 2015/1222 of 24 July 2015 establishing a guideline on capacity allocation and congestion management within Italy North CCR".

This report is provided in fulfilment of the RCC reporting obligations as covered within Article 16.3 of Commission Regulation (EU) 2019/943 for Q3 2022. The content of this report also covers the reporting requirements according to Article 26.5 of Commission Regulation (EU) 2015/1222 towards the IN NRAs.

According to Article 16.3 of the Commission Regulation (EU) 2019/943 :

*"Regional coordination centres shall carry out coordinated capacity calculation in accordance with paragraphs 4 and 8 of this Article, as provided for in point (a) of Article 37(1) and in Article 42(1).*

*Regional coordination centres shall calculate cross-zonal capacities respecting operational security limits using data from transmission system operators including data on the technical availability of remedial actions, not including load shedding. Where regional coordination centres conclude that those available remedial actions in the capacity calculation region or between capacity calculation regions are not sufficient to reach the linear trajectory pursuant to Article 15(2) or the minimum capacities provided for in paragraph 8 of this Article while respecting operational security limits, they may, as a measure of last resort, set out coordinated actions reducing the cross-zonal capacities accordingly. Transmission system operators may deviate from coordinated actions in respect of coordinated capacity calculation and coordinated security analysis only in accordance with Article 42(2).*

*By 3 months after the entry into operation of the regional coordination centres pursuant to Article 35(2) of this Regulation and every three months thereafter, the regional coordination centres shall submit a report to the relevant regulatory authorities and to ACER on any reduction of capacity or deviation from coordinated actions pursuant to the second subparagraph and shall assess the incidences and make recommendations, if necessary, on how to avoid such deviations in the future."*

Based on our interpretation of the regulation, this report is required to contain three key components:

1. Reporting cases of reduction of capacity or deviation from coordinated actions per timestamps (TS) for the region
2. Assessing the incidences related to (1) – data analysis of how many TS were affected on a quarterly basis
3. Making recommendations, if necessary, on how to avoid such deviations in the future

Moreover, this report presents the results of TSs in which the 70% adjustment could not be performed due to a lack of costly RA capacity provided by the TSOs in accordance with Art 13.2. of the Capacity Calculation Methodology for Italy North CCR. The Q3 report includes the results from the 1st of July till the 30th of September. The number of days considered in this report is 92 days for both D2 and ID capacity calculation process.

## **2. Description of the reported reductions of capacity**

The report presents the following information:

### **2.1. Reduction of capacity after 70% adjustment**

The Italy North (IN) region performs a coordinated Total Transmitted Capacity (TTC) Adjustment process. The adjustment is done by calculating the margin required on the limiting Critical Network Elements (CNEs) to fulfil the 70% minMargin requirement and adjusting the capacity accordingly by the use of costly remedial actions made available by the TSOs. In case the capacity available for adjustment is lower than the required amount to be adjusted, it is considered that the capacity has been reduced since it cannot fulfil the 70% margin required.

It has to be taken into account that the adjustment cannot always be performed since for some TS there is no grid information due to any possible issue on the TTC Calculation process (previous step to TTC Adjustment).

### **2.2. Reduction of capacity after TSOs validation process**

The TSOs of IN region can apply a local validation of the adjusted TTC results, to avoid violation of the security limits. The validated TTC results are then used to compute the final bilateral NTC values. The reduction can be a global or a bilateral incidence. A global validation by a TSO results in a reduction of the total TTC calculated for the northern Italian borders. A bilateral validation results in a reduction that concerns only the border of the country that is reducing the capacity. The TSO(s) that apply the reduction provide a reason that justifies it. Moreover, this reduction of capacity can also imply that the 70% minMargin required in any given TS is not reached.

### 3. Description of the report

This report has been created for the D2 and ID process. For the D2 process, 24 TSs are covered, while for the ID process, 12 TSs are currently covered. The relevant TSs for analysis in both D2 and ID process are:

- The cases when TSOs reduce the TTC calculated by RCCs during the local validation step – this reduction could be a global or bilateral incidence.
- The TSs where 70% reduction occurred during the adjustment and or local validation step of the process.
- Cases when the TTC calculation process failed are not considered – such cases correspond to instances when the “*LimitedBy*” variable within the *TTC\_Adjustment* is defined as: “*ScheduledTTC*”.
- We also do not consider cases where a Redflag raised by the TSOs during the local validation step results in capacity increase.

More details on the information presented on this report can be seen on the excel file attached on the package **Summary Art16.3 D2 & ID Report Data.xlsx**. This file contains the same information provided on the document in excel format.

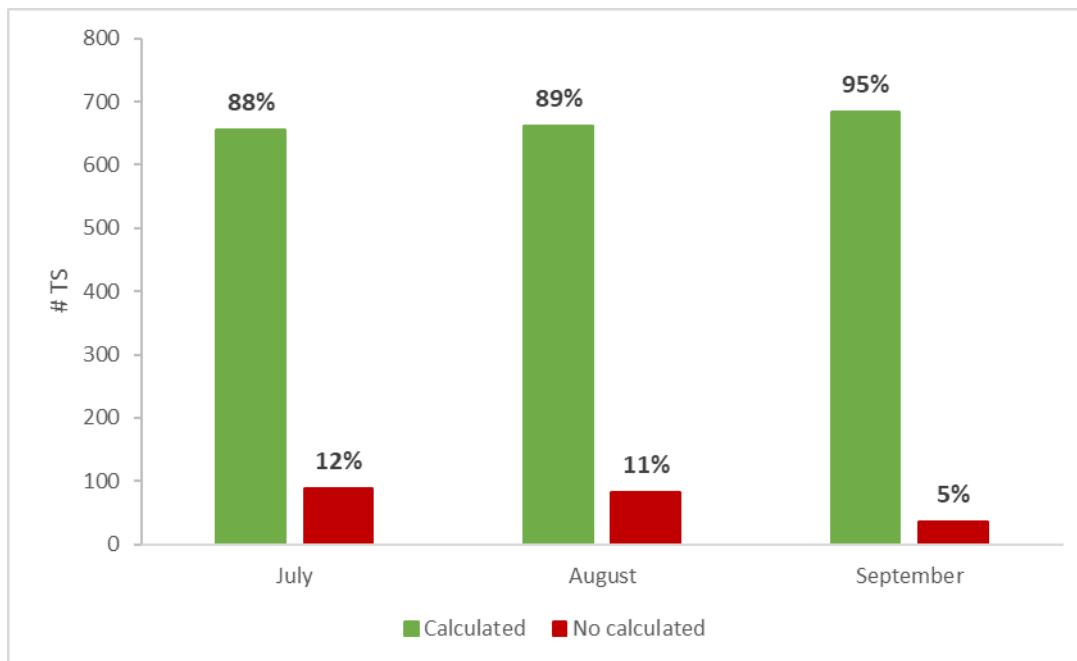

## 4. D2 information

### 4.1. Reduction of capacity after 70% adjustment

In this section, we report on the TSs within the D2 process where reduction of capacity after the 70% minMargin adjustment occurred.

The following figure presents, per month, a summary of the TSs that successfully performed in Q3 the TTC calculation process. Please note that the adjustment process could be performed only on these calculated TSs.

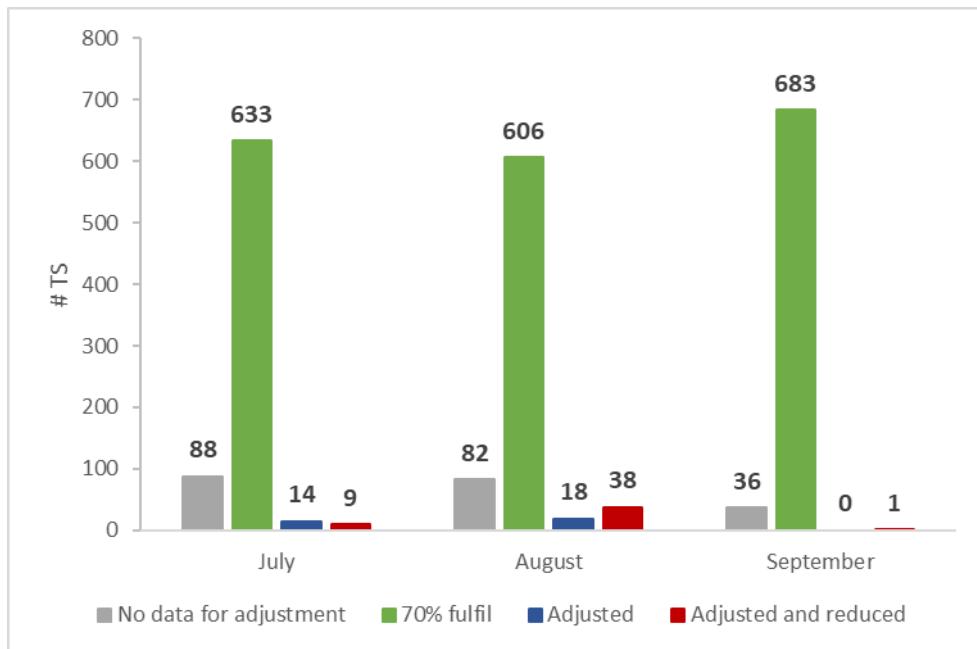

*Figure 1: D2 TTC Calculation results*

The figure below shows per month the different TSs classified as:

- No adjustment: timestamps in which no adjustment was performed either because there was no input data to perform the TTC calculation process or due to failure of TTC calculation process
- 70% minMargin Compliant: timestamps in which the adjustment could be performed but there was no need to perform it because the calculated capacity is already compliant with the 70% minMargin
- Adjustment: timestamps in which some adjustment was required and there was enough capacity to perform the adjustment.
- Adjustment and reduction: timestamps in which some adjustment was required and there was not enough capacity to perform the adjustment to the 70% minMargin, thus for these timestamps.

Figure 2: D2 summary of TS during the adjustment process

More details are presented for each month in the next tables.

Table 1: D2 Reduction after 70% minMargin adjustment for July

BD	TS	TTCAdj (MW)	ANTCfinal (MW)	ANTCfeasible (MW)	LimitedBy	70% reduction (MW)	% reduction

## 4.2. Reduction of capacity after TSOs validation

In this section, the TSs within the D2 process where reduction of capacity after the TSO validation occurred are reported. During Q3 the validation process could be performed for all business days, thus no fallback values were applied. The figure below presents different validated TSs classified as:

- No red flag raised: TSs in which no capacity reduction was requested by the TSO during the validation step and no red flag raised
- Red flag raised and no reduction: TSs in which some validation flags were raised but no capacity reduction occurred
- Red flag raised and reduction: TSs in which the local validation step by the TSO resulted in a capacity reduction and a red flag on the NTC1 file.
- Red flag raised and reduction and 70% minMargin not reached: TSs in which the local validation step by the TSO resulted in a 70% capacity reduction.

*Figure 3: D2 summary of TS during the validation process*

#### 4.2.1. Reduction on TTC

In this section the TSs with TTC reduction as presented in section 2.2 are presented for each month. In the tables presented, the validation performed by the TSOs is divided between:

- Global validation: when the TSOs send a red flag that is limiting the total exchange of the region
- Bilateral validation: when the TSOs send a red flag that is only limiting their border with Italy

*Table 4: D2 TS with global TTC reduction during the validation process for July*

#### 4.2.2. Reduction on TTC and on 70% requirement

In this section the TSs with TTC reduction and reduction of capacity compared to 70% minMargin as presented in section 2.2. In the tables presented, the validation performed by the TSOs is divided between:

- Global validation: when the TSOs send a red flag that is limiting the total exchange of the region
- Bilateral validation: when the TSOs send a red flag that is only limiting their border with Italy

*Table 8: D2 TS with global TTC reduction and reduction compared to 70% during the validation process for July*

### 4.3. Deviation from coordinated actions

Not applicable for Italy North region

## 4.4. Assessment of the incidences

On this section an analysis of the reduction issues is assessed for each of the cases:

1. Reduction due to costly remedial actions during the adjustment process
2. Reduction due to the red flags sent by the TSOs

### 4.4.1. Assessment of 70% reduction

This chapter presents an overview of the capacity required for adjustment on the TS that suffered the reduction and could not fulfil the required adjustment of the 70% minMargin.

Figure 4 presents the distribution of required capacity to be adjusted per month. Moreover, the average of feasible capacity for the adjustment on that month is represented. Figure 5, presents the average % of reduction per month together with the amount of TS with reduction.

*Figure 4: D2 Distribution of required capacity for adjustment vs average of feasible capacity*

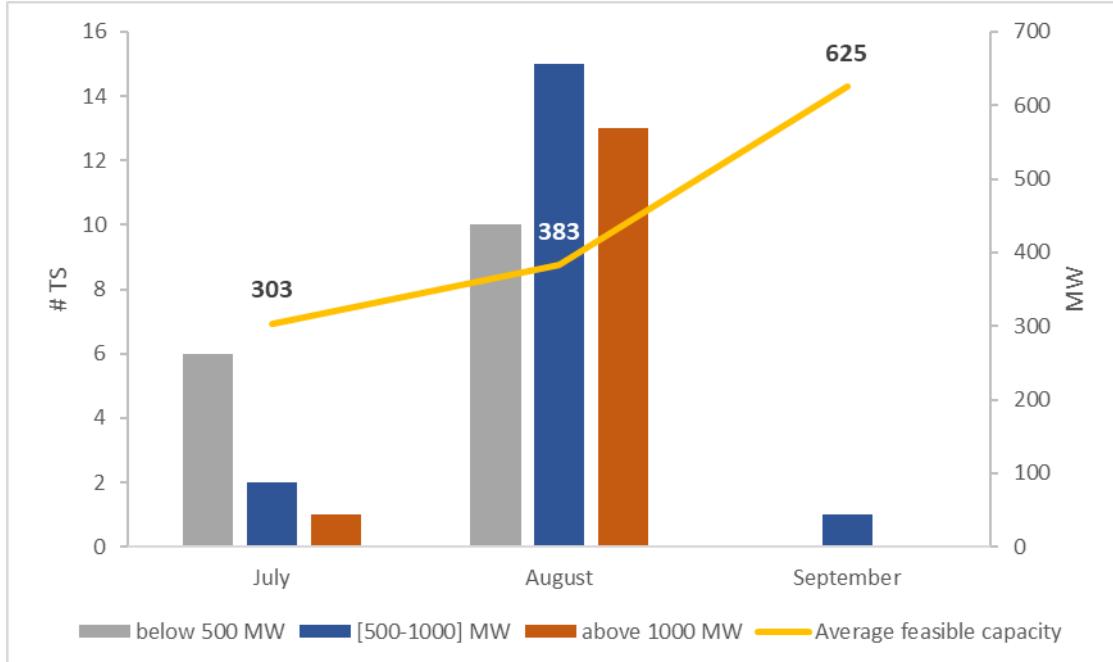

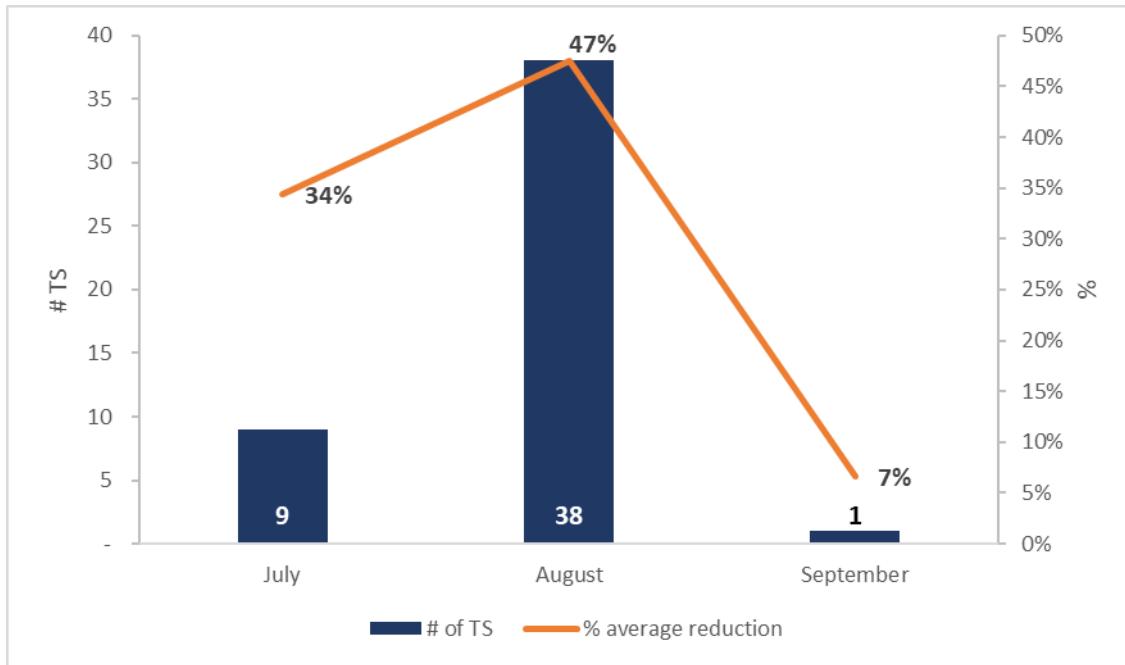

Figure 5: D2 # TS with reduction per month vs the average % of reduction on that month

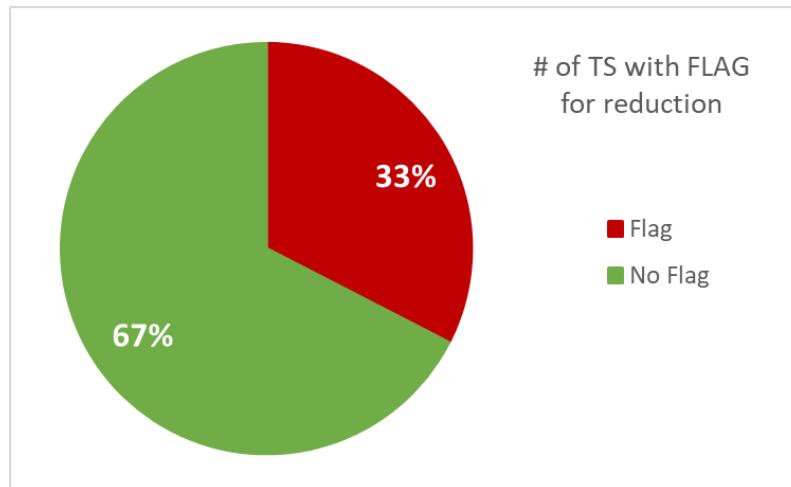

The month with the highest amount of TS with reduction was August, also impacted by the highest required adjustment, thus causing the highest reduction of capacity.

#### 4.4.2. Assessment of red flags sent by TSOs

This chapter presents an analysis of the reduction red flags sent by the TSOs. The following figure presents the distribution of TSs with and without flag during the period of analysis.

Figure 6: D2 share of TS with and without flag

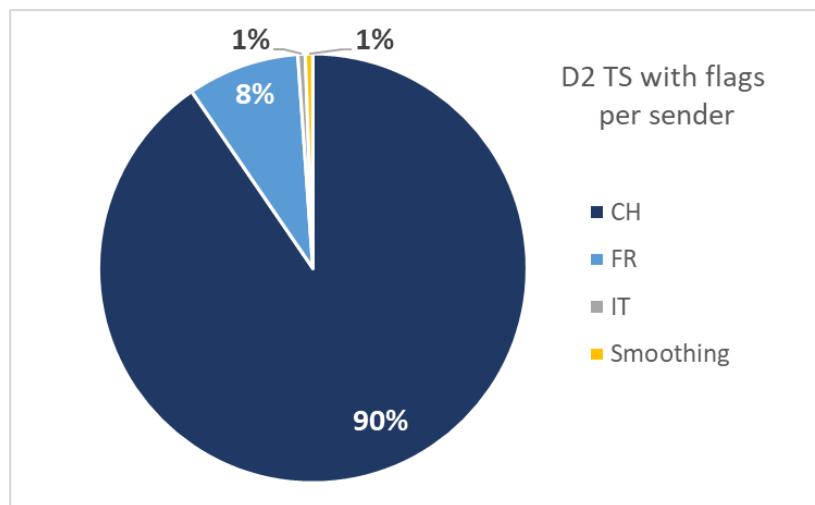

In D2, the validation process during Q3 was limited by four types of flag's provider:

- Flags sent by Swissgrid
- Flags sent by RTE
- Flags sent by TERNA
- Smoothing process: this validation is part of the NTC Calculation methodology. This process can cause a possible reduction of the adjusted capacity since the difference of capacity between the hours of the day should not be higher than 1500MW.

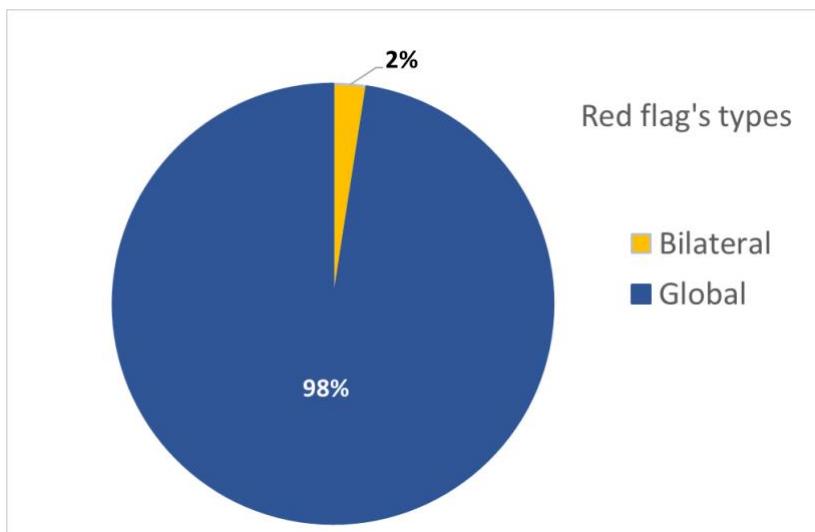

The following picture presents the share of each type of flag during the quarter. It can be seen that the TSO with the highest share of reduction is Swissgrid.

*Figure 7: D2 share of TS with flags classified by sender*

The type of flags has also been classified depending on if they were global or bilateral:

*Figure 8: D2 Share of global and bilateral flags*

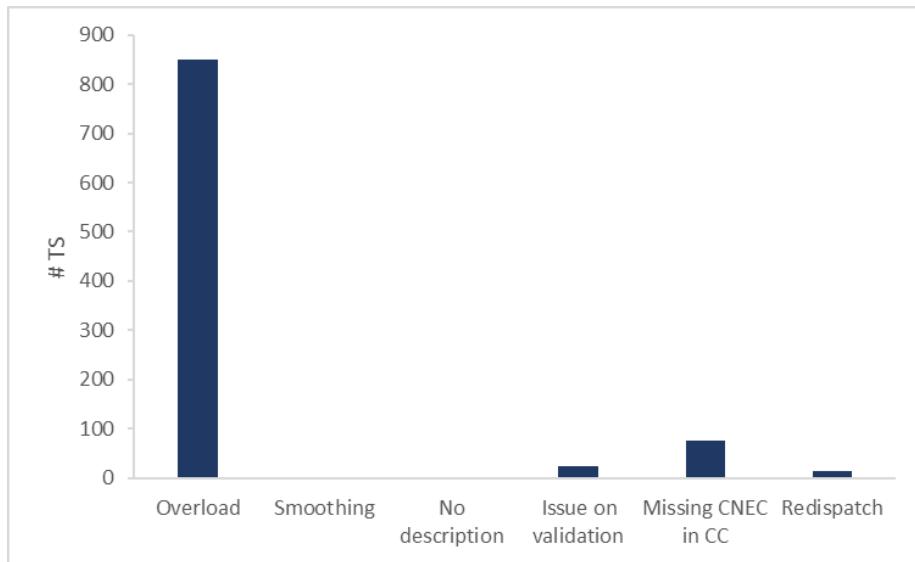

Moreover, the following classification of flags has been done based on the reason provided by the TSOs:

- Overload
- Issue on validation
- Missing CNEC in Capacity Calculation
- Fault
- Redispatch issue
- No description provided

The pictures below, present the type of flags sent by each TSO

*Figure 9: D2 type of flags sent by Swissgrid*

*Figure 10: D2 type of flags sent by RTE*

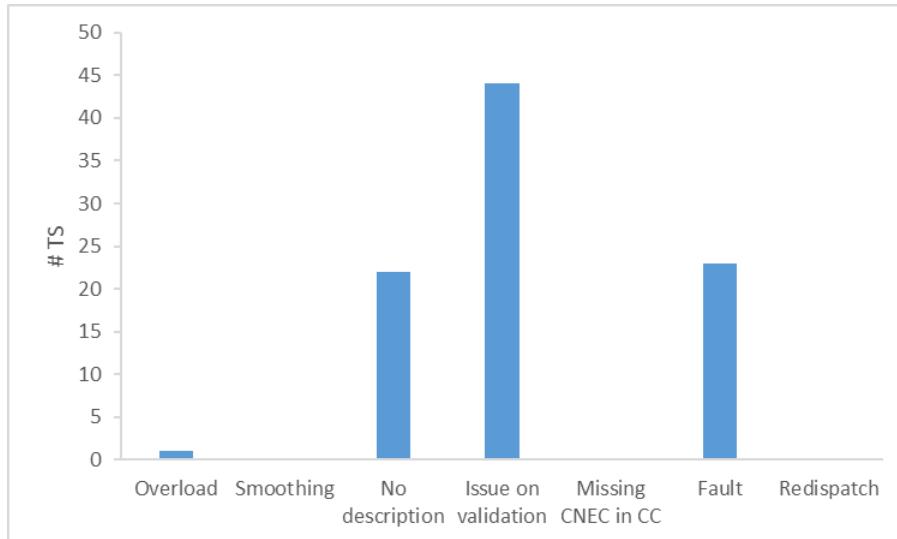

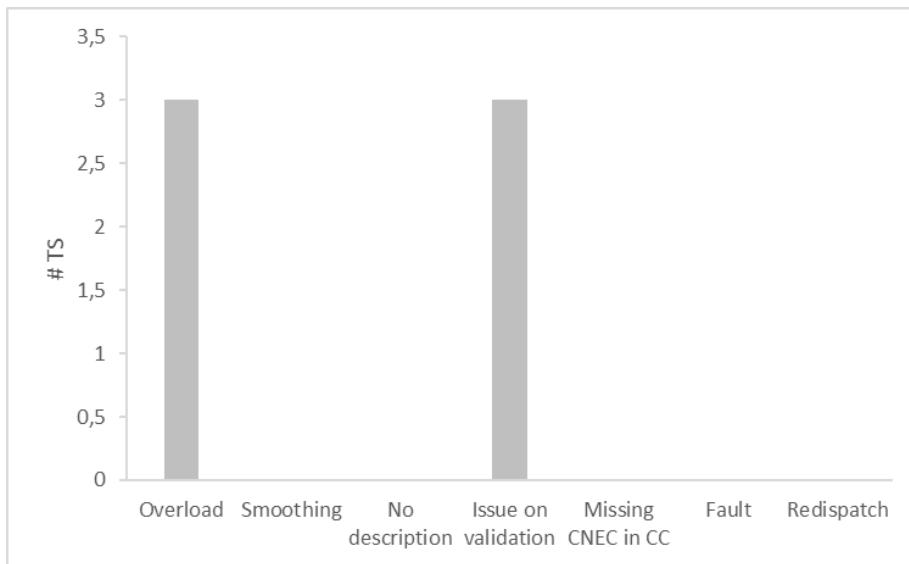

Figure 11: D2 type of flags sent by TERNA

Finally, the Overload reasons have been analysed and the following lines and outages are the ones that have been limiting the capacity during the Q3.

## 4.5 Recommendations

Not applicable for Italy North region

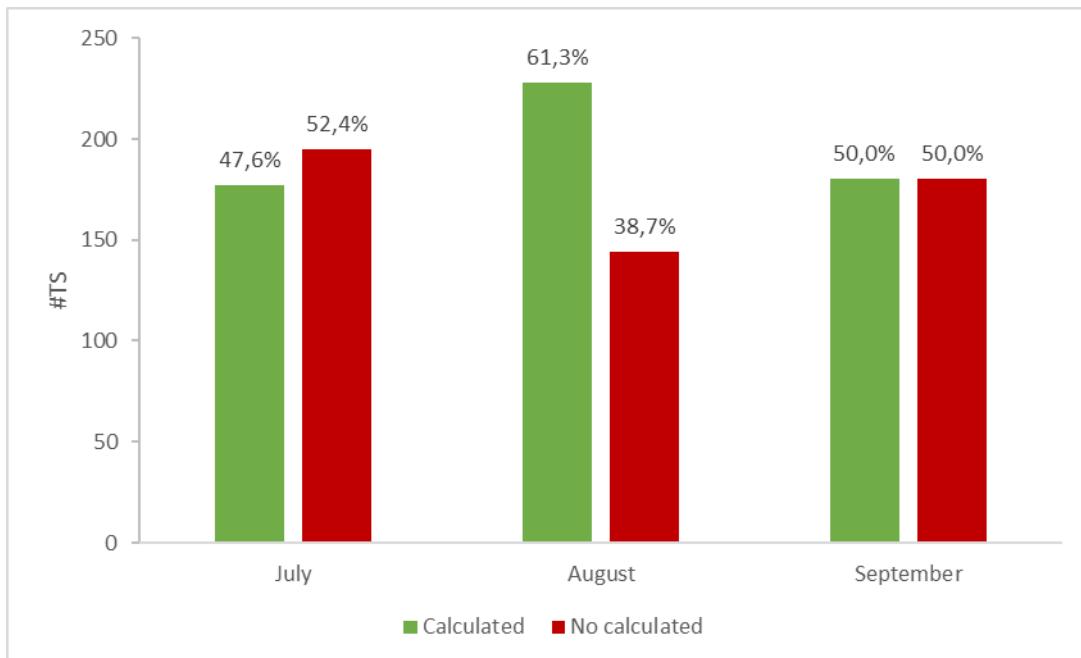

## 5. ID information

### 5.1. Reduction of capacity after 70% adjustment

In this section, we report on the TSs within the ID process where reduction of capacity after the 70% minMargin adjustment occurred.

The following figure presents, per month, a summary of the TSs that successfully performed in Q3 the TTC calculation process. Please note that only on these calculated TSs, the adjustment process could be performed.

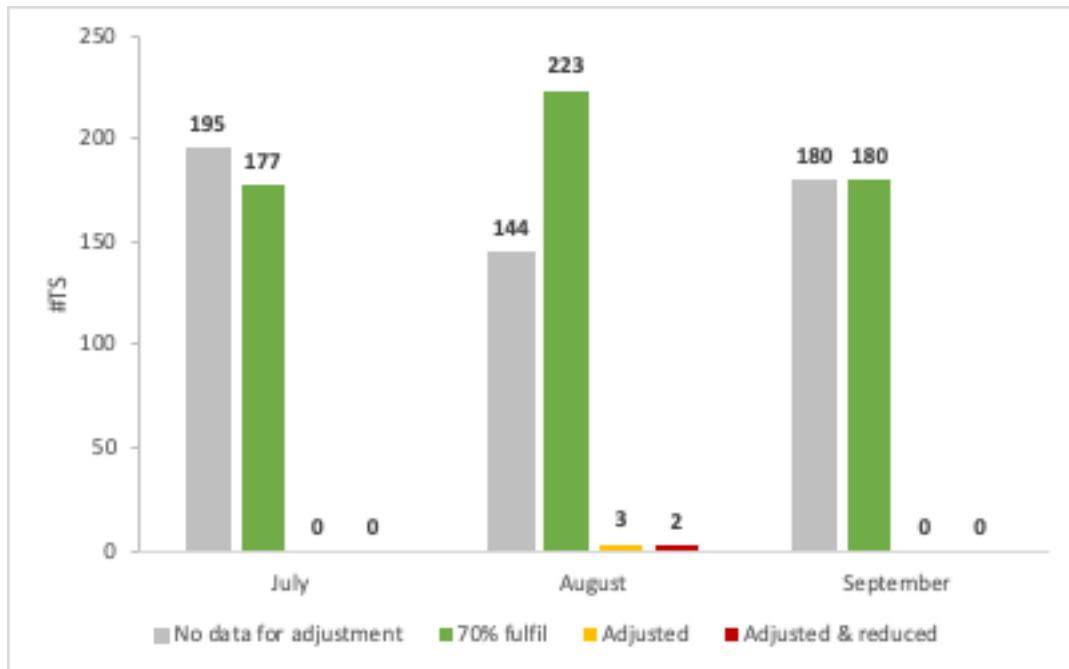

*Figure 12: ID TTC Calculation results*

The following figure presents the different TSs for the ID process classified as described in the D2 cases in sub-section 4.1. In the case of ID process, the 70% minMargin compliant timestamps consist of two different cases:

1. Timestamps in which the capacity was already fulfilled in D2 process.<sup>1</sup>
2. Timestamps in which the capacity was not fulfilled in D2 process but during the ID process the grid was 70% minMargin compliant.

*Figure 13: ID summary of status of TSs during adjustment process*

More details are presented for the month of August for the ID process in the following table below since it is the only month in which the reduction of capacity after the 70% minMargin adjustment occurred for the IDCC process.

*Table 14: ID Reduction after 70% minMargin adjustment for August*

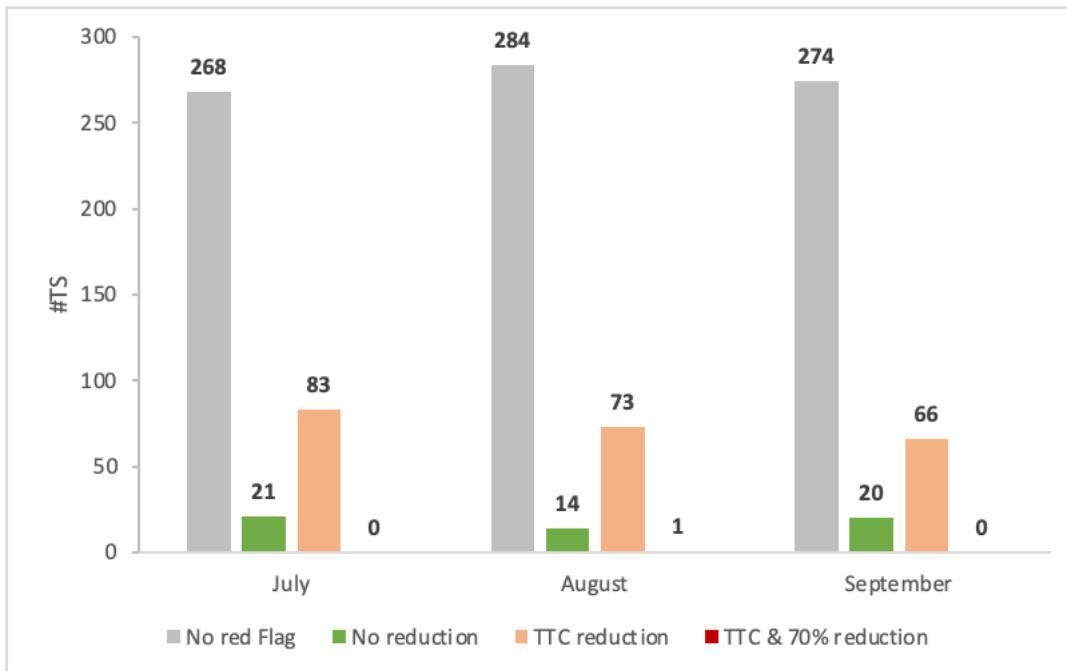

BD	Month	TS	TTC (MW)	ANTCfinal (MW)	ANTCfeasible (MW)	LimitedBy	70% reduction (MW)	% reduction
20220826	August	1230	2999	584	337	Minimum Margin	247	42%
20220826	August	1330	2999	584	337	Minimum Margin	247	42%

<sup>1</sup> For the 2022 Q3 report it was not feasible to make the distinction between the TS compliant in D2 process and the ones not compliant. These details will be considered for the future reports.

## 5.2. Reduction of capacity after TSOs validation

According to the criteria defined in subsection 2.2, in this subsection, we present the TSs within the ID processes where reduction of capacity occurred after TSO validation. The following figure presents the different TSs for the ID process as described in the D2 cases in subsection 4.2. For this quarter, for all business days, the validation of the TSOs could be taken into account in the final step of the NTC calculation.

*Figure 14: Summary of status of TSs during validation process in ID*

## 5.2.1 Reduction on TTC

In this section the TSs with TTC reduction as presented in section 2.2 are presented for each month. In the tables presented, the validation performed by the TSOs is divided between:

- Global validation: when the TSOs send a red flag that is limiting the total exchange of the region
- Bilateral validation: when the TSOs send a red flag that is only limiting their border with Italy

*Table 15: ID TS with global TTC reduction during the validation process for July*

### 5.2.1 Reduction on TTC and on 70% requirement

In this section the TSs with TTC reduction and reduction of capacity compared to 70% minMargin as presented in section 2.2. In the tables presented, the validation performed by the TSOs is divided between:

- Global validation: when the TSOs send a red flag that is limiting the total exchange of the region
- Bilateral validation: when the TSOs send a red flag that is only limiting their border with Italy

*Table 21: D2 TS with global TTC reduction and reduction compared to 70% during the validation process for August*

BD	TS	TTC (MW)		ANTC (MW)			LimitedBy		Validation (MW)		TSO	Value (MW)	Reason
		Adj	Validated	Final	Feasible	NTC1	Adjustment	NTC1	Reduction TTC	Reduction TTC and 70%			
20220826	1230	2999	1907	584	337	1321	Minimum Margin	Validation phase	1092	1078	SWG	1596	Expected overloading of the following element CNE : 380kV Pradella-Y/Punt C:Voehringen-Woringen

### 5.3. Deviation from coordinated actions

Not applicable for Italy North region

## 5.4. Assessment of the incidences

On this section an analysis of the reduction issues is assessed for each of the cases within the IDCC process. The relevant cases for assessment are:

1. Reduction due to costly remedial actions during the adjustment process
2. Reduction due to the red flags sent by the TSOs

### 5.4.1. Assessment of 70% reduction

This chapter presents for the ID process; an overview of the capacity required for adjustment on the TSs that the 70% reduction occurred due to not enough redispatch capacity potential (costly remedial actions) to fulfil the required 70% minMargin after the adjustment process. For this quarter, this incidence occurred only in two TSs of August for the IDCC process.

Figure 15, presents the distribution of required capacity to be adjusted in the relevant TSs in August. As it can be seen, both TSs had a required adjustment of capacity between 500 and 1000 MW. The figure also shows the average of feasible capacity for the adjustment on those TSs.

*Figure 15: ID Distribution of required capacity for adjustment vs average of feasible capacity*

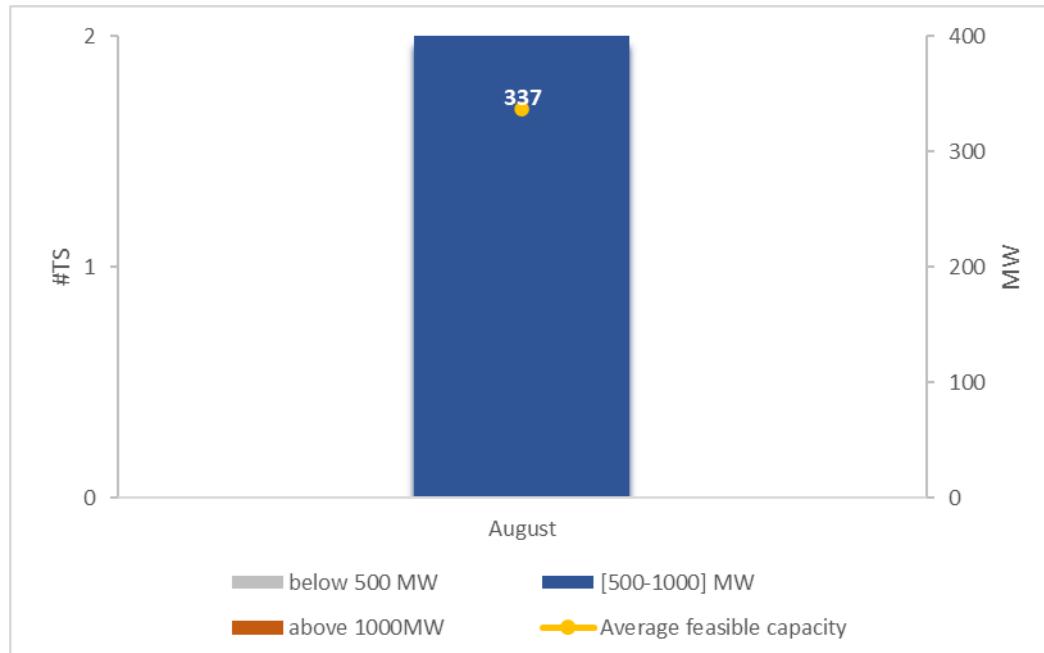

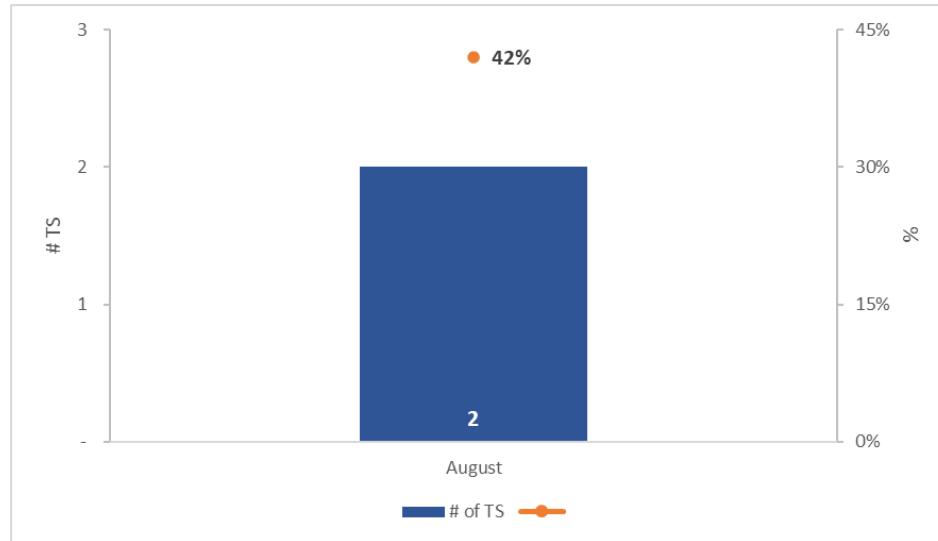

Figure 16 presents for the case of ID, the average % of reduction per month together with the amount of TS with reduction.

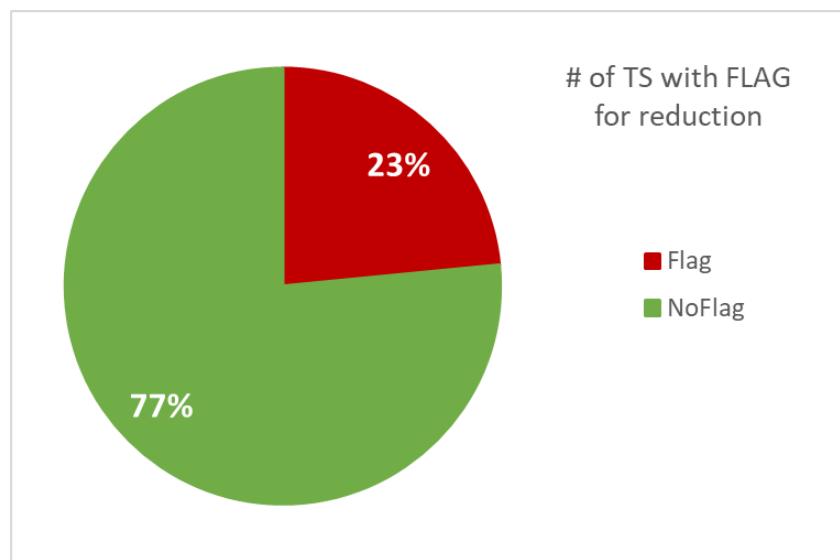

*Figure 16: ID #TS with reduction per month vs the average % of reduction on that month*

#### 5.4.2. Assessment of TTC reduction and red flags sent by the TSOs

This subsection presents an analysis of the reduction red flags sent by the TSOs. Figure 17 presents the distribution of TSs with and without flag during the period of analysis.

*Figure 17: ID share of TS with and without flag*

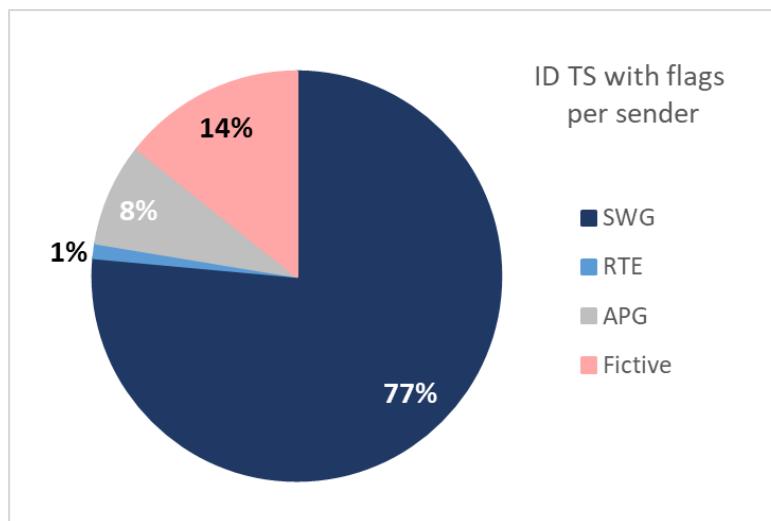

In ID, the validation process during Q3 was limited by four types of flag's provider:

- Flags sent by SWG
- Flags sent by RTE
- Flags sent by APG
- Fictive Flags: these flags are created automatically by the methodology when the process receives an invalid red flag file from any TSO. In these cases, the tool generates a global red flag with the minimum value between the scheduled TTC and the ID selected capacity.

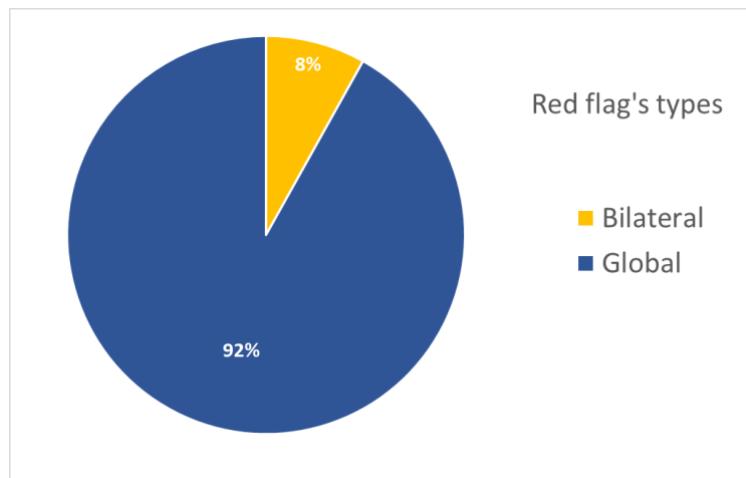

Figure 18 presents the share of each type of flag during the quarter. It can be seen that the TSO with the highest share of reduction is Swissgrid.

*Figure 18: ID share of TS with flags classified by sender*

The type of flags has also been classified depending on if they were global or bilateral:

*Figure 19: ID Share of global and bilateral flags*

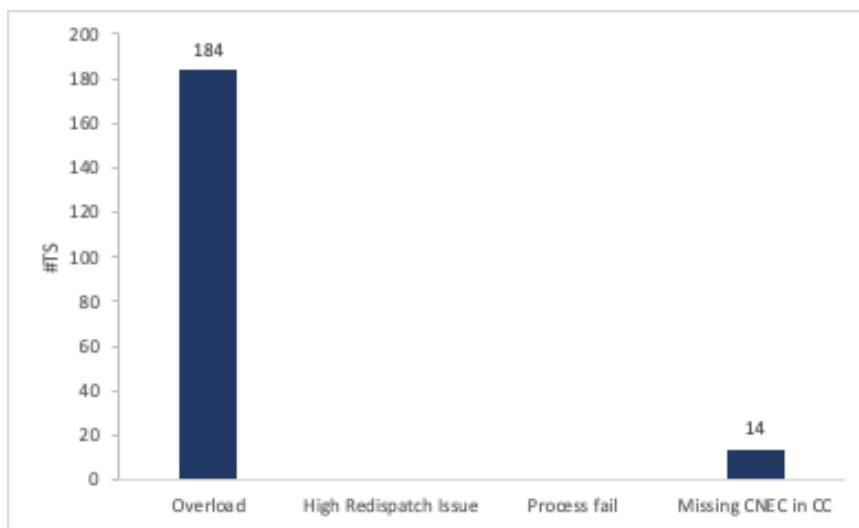

Moreover, the following classification of flags has been done based on the reason provided by the TSOs:

- Overload
- Missing CNEC in Capacity Calculation
- Process fail during TSO Validation
- High Redispatch issue

The figures below, present the type of flags sent by each TSO

*Figure 20: ID type of flags sent by Swissgrid*

*Figure 21: ID type of flags sent by RTE*

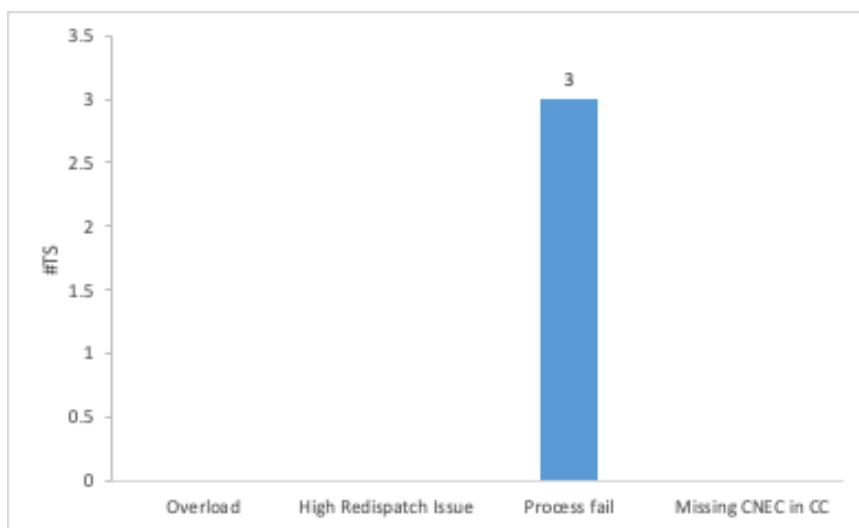

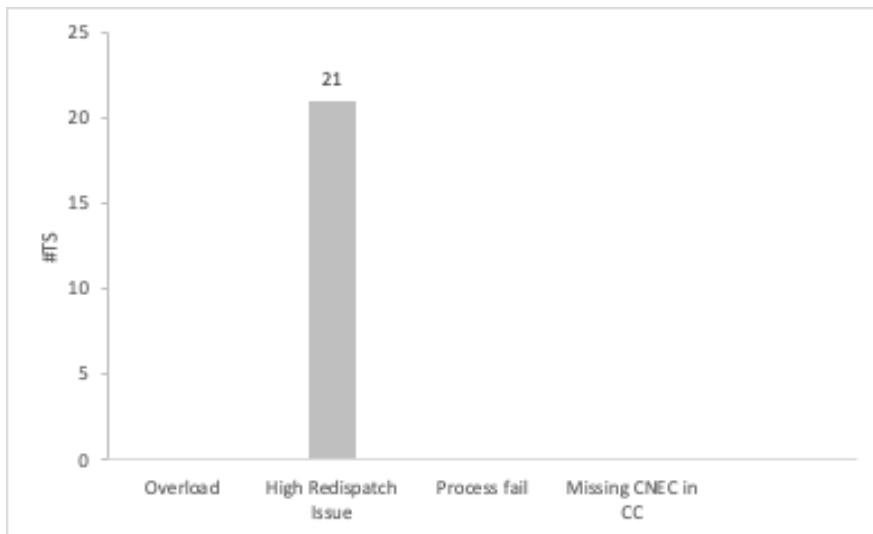

Figure 22: ID type of flags sent by APG

Finally, the Overload reasons for the ID process have been analysed and Figure 23 shows the percentage share of the CNECs that have been limiting the capacity during the Q3.

Figure 23: ID %Share of limiting CNECs reported on FLAGs

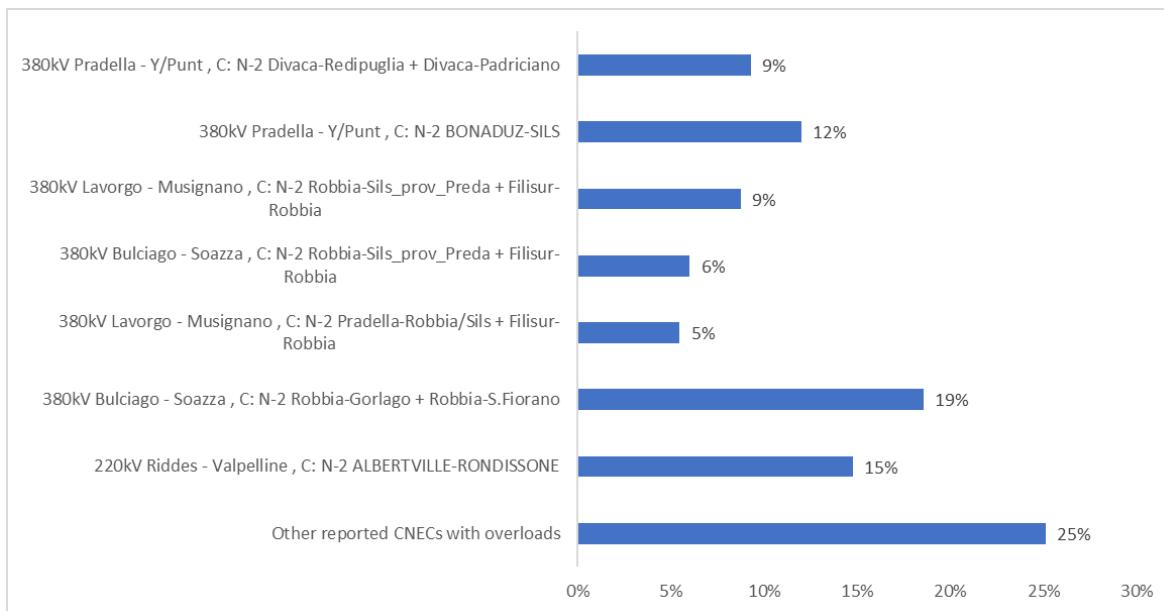

Figure 23 shows that the most limiting CNEC for the IDCC process was the "380kV Bulciago - Soazza , C: N-2 Robbia-Gorlago + Robbia-S.Fiorano", accounting for 19 % of the total flags raised by the TSOs in Q3.

Connect. Create. Coordinate.

## 5.5. Recommendations

Not applicable for Italy North region
